Replit Proof of Use

CashGuard Risk · Team Extragorjoss · SDC Hackathon 2026

Live prototype: https://cash-guard.replit.app (public, published on Replit)

Code repository: https://github.com/hecctarr/CashGuard (imported into Replit from GitHub)

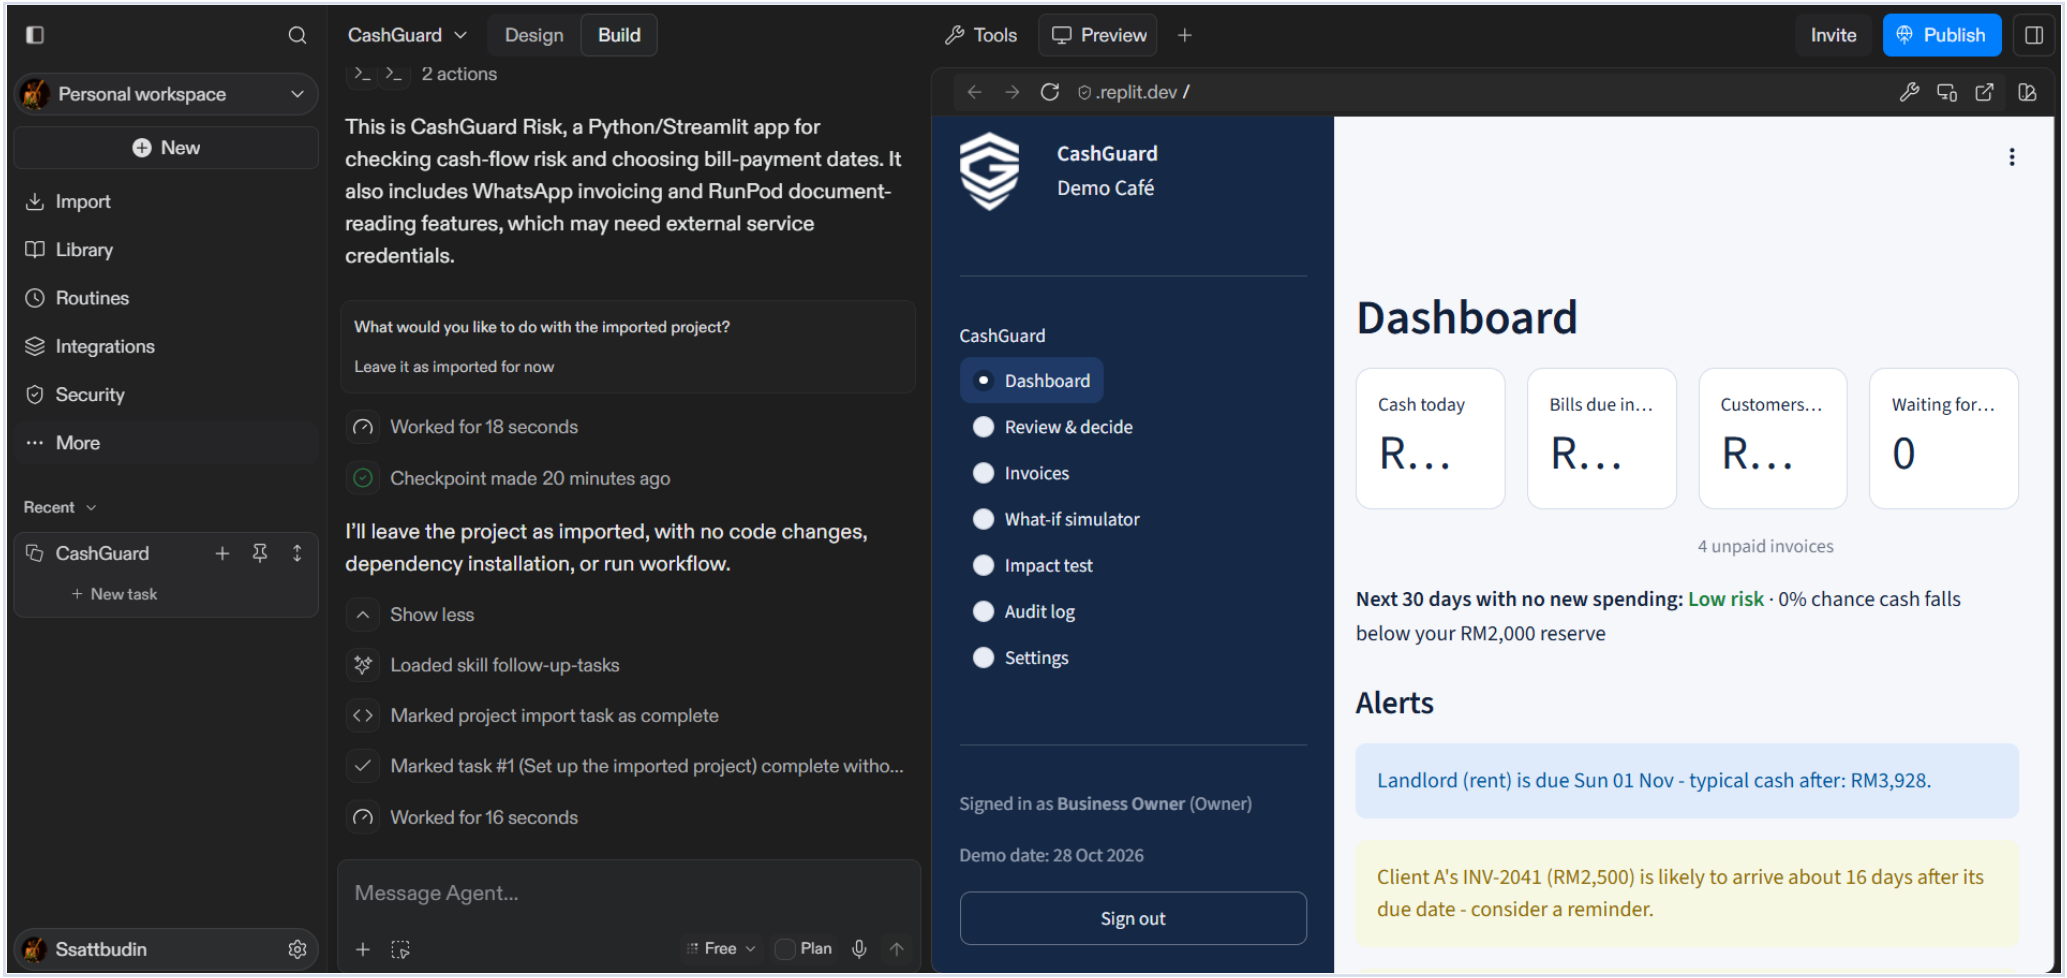

How we used Replit: the Streamlit web app (Python) is developed, run and hosted on Replit. Dependencies are installed in the deployment build step (pip install -r requirements.txt) and the app starts with python src/main.py. Keys for optional services would be kept in Replit Secrets, never in the code. The Replit Agent helped us import the project and fix the deployment settings; every change was reviewed by the team.

Demo sign-in for judges: owner / owner123 · manager / manager123 · staff / staff123 (fictional data only)

Date: 25 October 2026

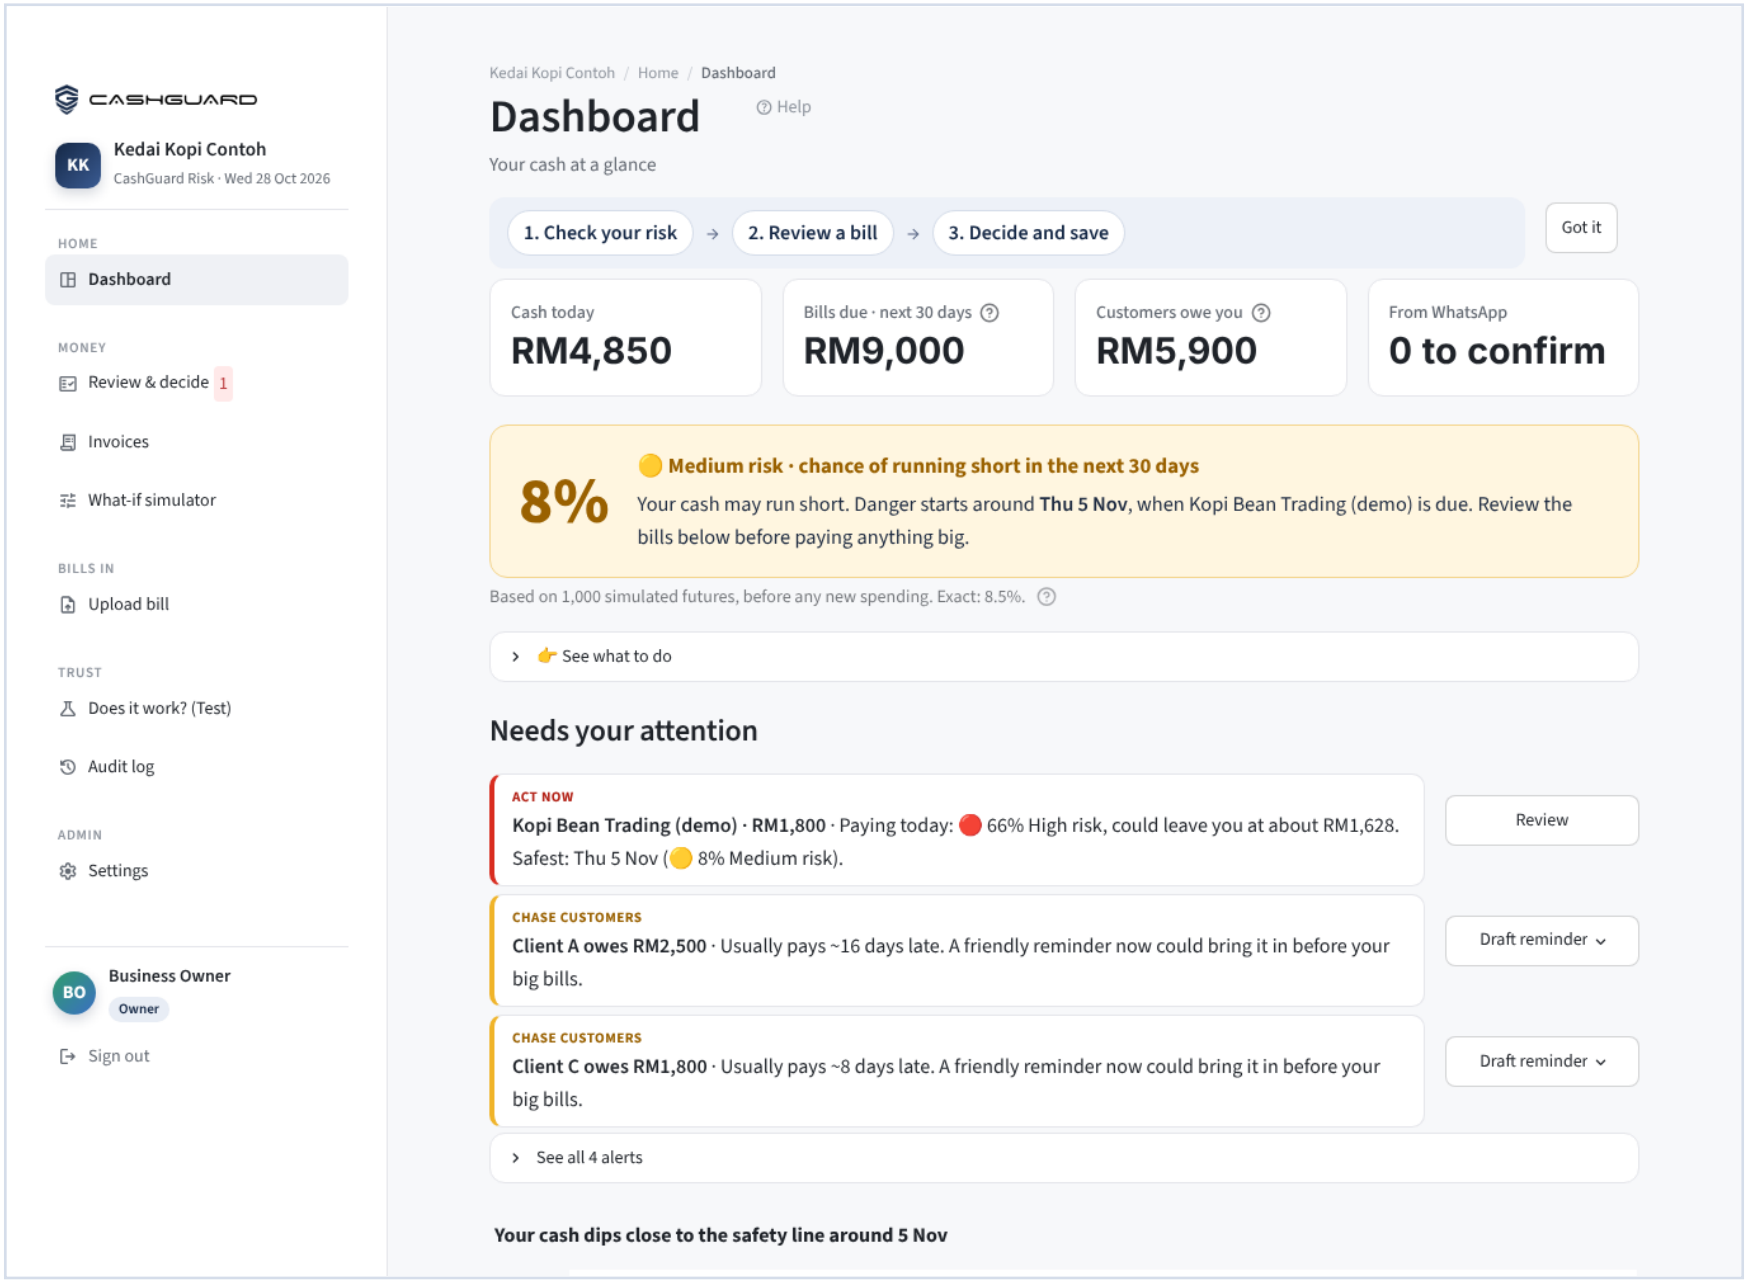

1. CashGuard running inside the Replit workspace

Replit Build view: the Agent panel (left) and the app preview running on Replit (right)

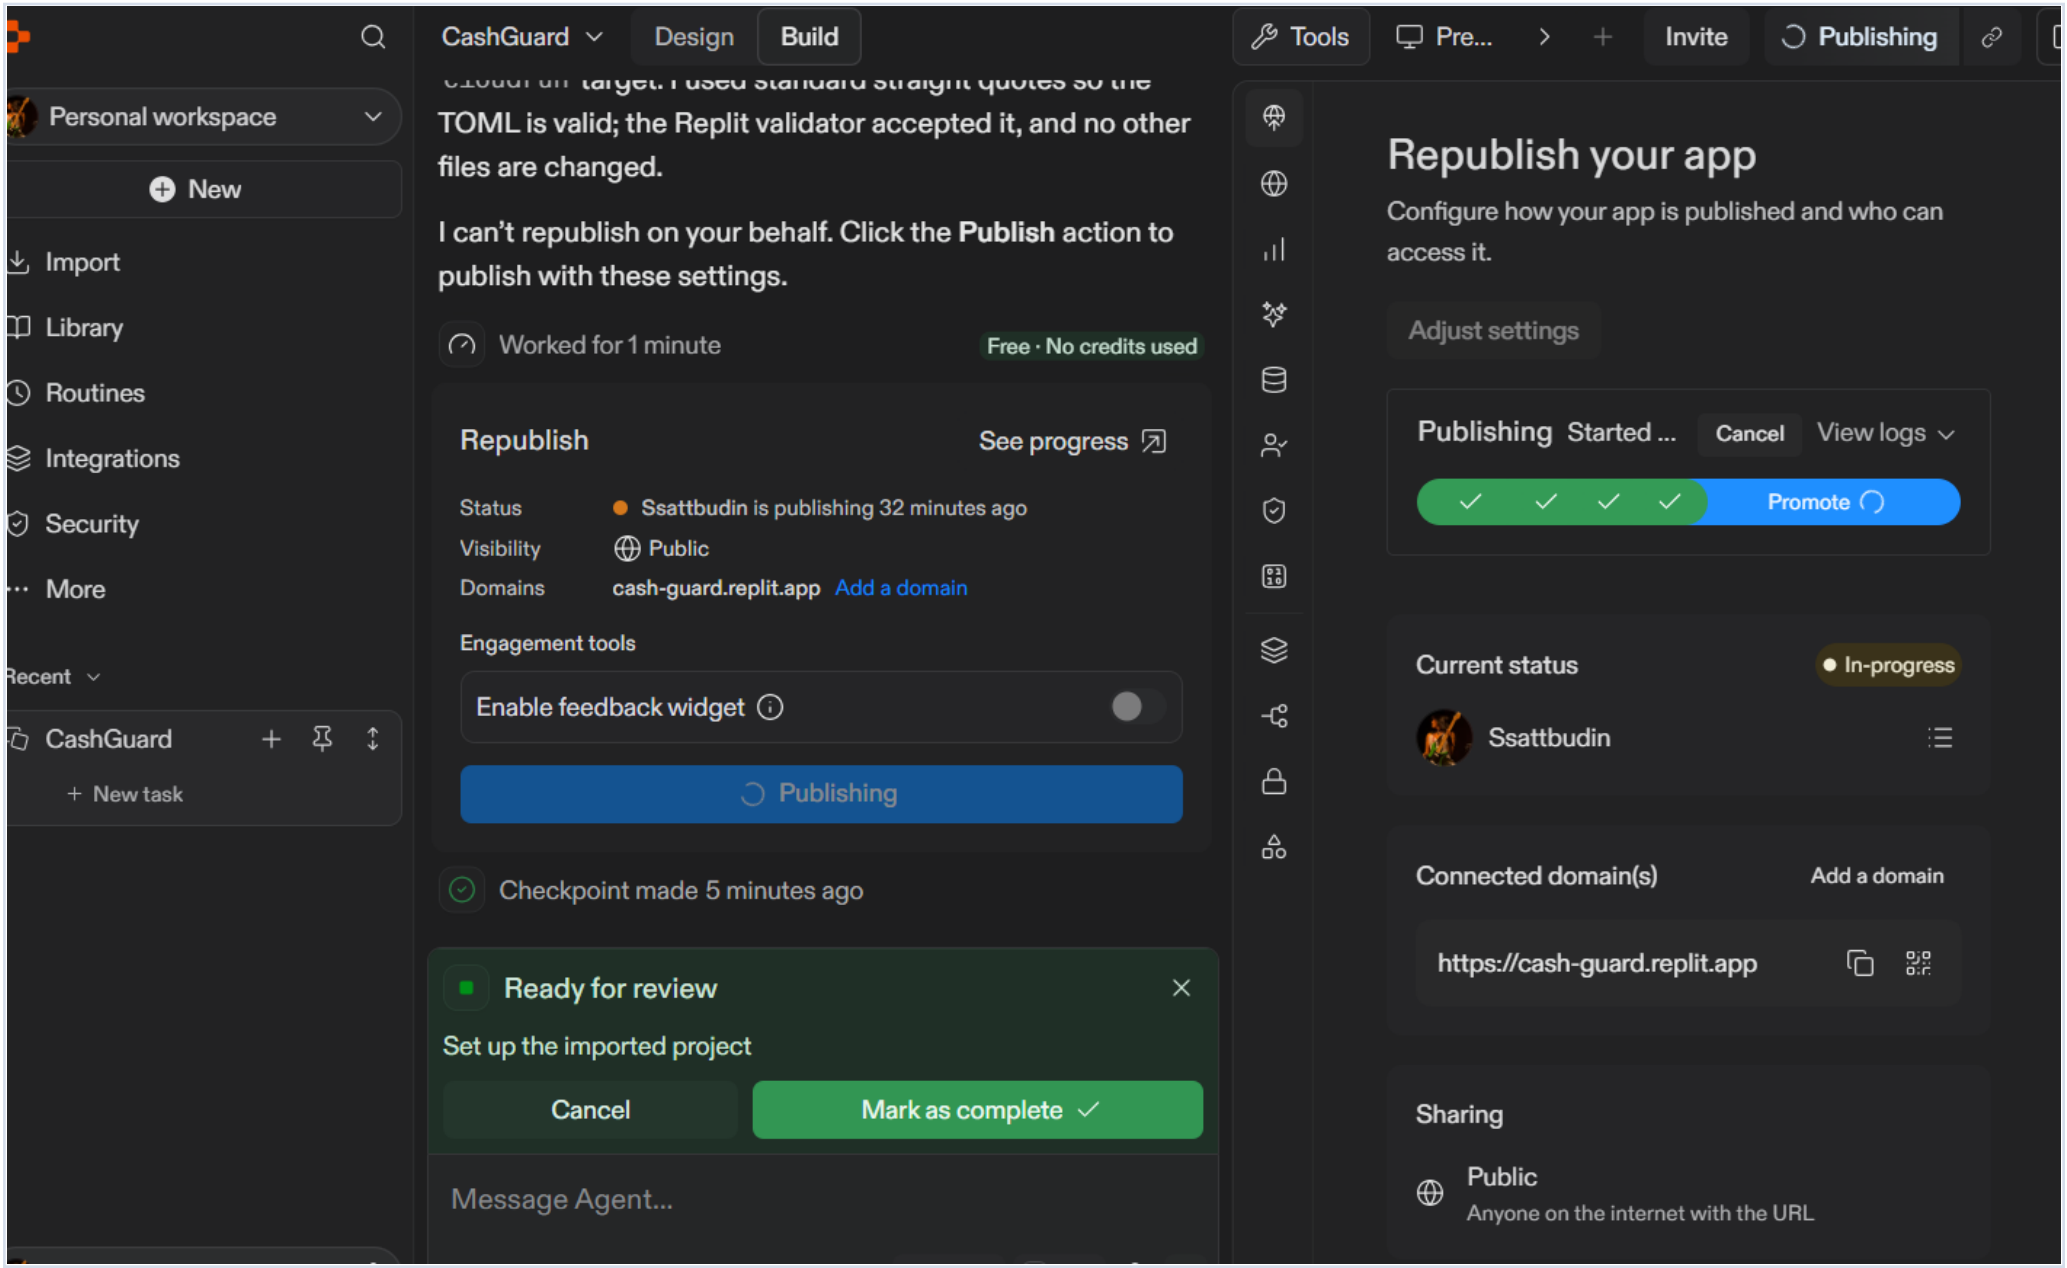

2. The upgraded CashGuard app

Owner dashboard of the latest version (the same code pushed to GitHub and deployed on Replit): risk card, alerts, safety-cushion chart

3. Publishing to cash-guard.replit.app

Replit Publishing: build, install and bundle steps complete, promoting to the public domain https://cash-guard.replit.app

4. The live public app

https://cash-guard.replit.app opened in a browser on 25 Oct 2026: the CashGuard sign-in page
